**Subject:** Massachusetts Test Definitions  
**Importance:** High

Robin, Tar is not being calculated for the new MA-TPM, MA-NIC etc. test definitions. Could you "push" the button for this? Also for MA97-2 we would like for you to go in and change the Instrument number to read 58 since pH is smoked on machine 58. The TPM and CO for this machine reports as 58 and we would like for the pH to be the same. It want let me go in and change an instrument number once we have applied it. 101 that is in there now does not go with any instrument. Let me know when it is taken care of. Once again a big THANKS! I am going to owe you "big time"!!
